---	---------------------------------	-----------------------------------	---------------------------------	-------------------------------

Myers-Briggs: ENTP

Professional:

I teach physics and general science to high school students. I'm also developing and executing a program for gifted students. Before becoming a teacher I studied Applied Physics (MSc), Management of Technology (MSc) and Science Education (MSc).

Gamification:

I've been experimenting with different gamification designs in my classes for about two years now. I've also given some small workshops in about gamification, and have some larger ones in the works. At the moment I'm less interested in point systems and specific (IT) tools for gamification. Instead, I'm focused on design for engagement, smart feedback, guided autonomy and playful learning.

Interests:

Oh so many! To name a few: dancing (salsa, latin, ballroom), motivational theory, practical wisdom, squash, board and computer games, running (recently ran my first marathon), personality types, hiking, organisational methods and human development

Gamer in me:

I like to use RPG's (i.e. Skyrim, Baldur's Gate, D&D) and Magic the Gathering to express myself creatively. In board games I like to explore different strategic routes. In Starcraft and MMORPG's I go for cooperation.
